(54) Title: **VEHICLE LAMP WITH INCREASED THERMAL STABILITY**

(57) Abstract: A lamp, in particular a vehicle lamp, is equipped with a burner (12), which is secured to a holding device (20, 22) made of metal. The lamp (10) is further equipped with a bottom section (24) made of plastic. In order that the lamp is of a simple, mechanically stable design, and nonetheless is thermally stable, in accordance with a first aspect, an opening (28) of the bottom section (24) is provided with projections (40) in such a way that a base sleeve (26) made of metal, which is disposed in the opening (28), does not bear laterally against the bottom section (24) over its entire surface. In accordance with a second aspect, the base sleeve (26) develops a flange (26a), which screens a top side (36) of the bottom section (24), at least partially, against the burner (12), wherein a (10) space remains between the flange (26a) and the top side (36) of the bottom section (24).
